

July 2006

**Re: RoHS (2002/95/EC) & WEEE (2002/96/EC) Directives**

**Applied Measurements Compliance Statement**

**RoHS (2002/95/EC)**

Applied Measurements product range, which includes pressure transducers/transmitter, load/force cells, torque transducers, LVDT displacement transducers and associated electronic instrumentation, falls into Category 9 – Monitoring and Control Instruments. Category 9 is currently exempt from the legislation, however, we are still working to ensure that all our products will be compliant in advance of its inclusion.

**WEEE (2002/96/EC)**

Applied Measurements will be labelling all of its products with the WEEE label (a crossed-out wheelie bin) from August 2006 onwards. Any equipment of our supply that has reached the end of its service life can be returned to us for disposal if you are unable to send it to an approved recycling plant for disposal in accordance with the WEEE Directive. The transport costs for any returned goods must be borne by the owner.

At time of writing this statement, the UK has not passed the WEEE legislation.

**APPLIED  
MEASUREMENTS  
LIMITED**
